PROFESSIONAL SUMMARY

Senior Cloud Architect & SRE transitioning into Agentic AI Infrastructure and Fiscal SecOps. Leveraging 17+ years of production operations and 125+ regulatory-grade incident investigations to design resilient, multi-cloud control planes. Specializing in the initial architectural blueprinting and systems design phase, I solve the 'Disaster Recovery Gap' and 'Token Runaway' risks before implementation. Proven track record in orchestrating Google Cloud and AWS resilience through Policy-as-Code, Zero-Trust network boundaries, and automated FinOps guardrails to drive both operational stability and unit economic efficiency.

TECHNICAL SKILLS

- **Cloud Platforms & Orchestration:** GCP (GKE Autopilot, Workload Identity Federation, Cloud Run), AWS (ECS Fargate, IAM, Route 53), Kubernetes (RBAC, Admission Control, KEDA)
- **AI Infrastructure & Governance:** Agentic Governance Patterns (Detect/Evaluate/Enforce/Remediate/Audit), Token Budgeting, Cost Attribution, LiteLLM
- **Security & Compliance:** OPA/Rego, Kyverno (ClusterPolicy), OIDC/WIF (Keyless), Trivy/Bandit (Supply Chain Security)
- **laC & Automation:** Terraform (Modular IaC, Remote State), Python 3.10+ (AsyncIO), Bash, GitHub Actions
- **Observability:** Prometheus, Cloud Monitoring, JSON Structured Logging, SLO/SLA Engineering

ARCHITECTURAL PROJECTS

Serverless Agentic Governance Controller (SAGC) | *Independent Architecture Portfolio* | Spring 2026

- **Architecture:** Designed a production-grade Admission Control Middleware (Sidecar Proxy) to secure autonomous Agentic AI workloads against "token runaway."
- **Fiscal Impact:** Architected a decoupling of business logic from fiscal governance, reducing potential enterprise financial exposure by \$250,000+ per incident (*based on modeled max-concurrency API exhaustion rates*).
- **Resilience:** Authored elite-grade operational playbooks and ADRs establishing "Fail-Closed" security postures, preserving OpenTelemetry forensics during P0 circuit-breaker events.

NorthStar Commerce Multi-Cloud DR Platform | *Independent Architecture Portfolio* | 2026

- **Architecture:** Blueprint and initial design of an active-passive disaster recovery architecture spanning AWS and GCP, targeting 0s RTO and 1s RPO via declarative Terraform state management.
- **Security:** Implemented OIDC keyless authentication (Workload Identity Federation) across multi-cloud boundaries, eliminating the operational tax of long-lived secret management.

PROFESSIONAL EXPERIENCE

Cloud Architecture Practice (Independent Consulting) | February 2026 – Present *Architecting production-ready blueprints for LLM and cloud-native workloads, focusing heavily on initial systems design, observability, and automated cost governance.*

- **Key Achievement:** Designed a comprehensive five-stage governance lifecycle (Detect → Evaluate → Enforce → Remediate → Audit) utilizing ConfigMap persistence to ensure strict FinOps compliance and non-repudiable audit trails.

The Onyx Collection | Quality Assurance Technician | January 2020 – February 2026 *Applied rigorous Site Reliability Engineering (SRE) principles to physical manufacturing lines.*

- Led root cause analysis (RCA) on production incidents, establishing a systematic postmortem methodology directly translatable to cloud operations and distributed systems.

Halliburton / Oil Well Perforators | Wireline Operator & Downhole Technician | September 2018 – January 2020 *Managed safety-critical, high-pressure equipment under federal regulatory oversight.*

- Achieved zero unplanned downtime during extended field deployments in high-consequence operating environments, reinforcing a "Safety > Uptime" incident command discipline.

MST / Atlantic Express | Field Supervisor | July 2007 – August 2014 *Directed field operations and incident management under rigorous DOT regulatory frameworks.*

- Led 125+ formal incident investigations, establishing structured root cause analysis (RCA) methodology and documentation standards now applied to cloud reliability.
- Maintained 100% safety compliance record across extended field deployments.

CERTIFICATIONS

- Google Cloud Certified - Professional Cloud Architect (Active)
- AWS Certified Solutions Architect – Associate (Active)
- HashiCorp Certified: Terraform Associate (Expected June 2026)
- CompTIA Security+ (Target: August 2026)
