PROFESSIONAL SUMMARY

Senior Cloud Architect & SRE with 17+ years of operations experience, specializing in **Agentic AI Infrastructure, Fiscal Governance, and Cloud-Native Reliability**. Expert in designing event-driven control planes for LLM workloads that eliminate "token runaway" risks. Proven track record of applying rigorous incident investigation methodologies—honed through 125+ regulatory-grade RCAs—to modern distributed systems. Committed to zero-trust architecture, keyless authentication, and policy-as-code patterns.

TECHNICAL SKILLS

- **Cloud & Orchestration:** GCP (GKE Autopilot, Workload Identity, Cloud Run), AWS (ECS Fargate, IAM, Route 53), Kubernetes (RBAC, Admission Control, KEDA).
- **AI Infrastructure:** Agentic Governance Patterns (Detect/Evaluate/Enforce/Remediate/Audit), LiteLLM, Token Budgeting, Cost Attribution.
- **Security & Policy:** OPA/Rego, Kyverno (ClusterPolicy), OIDC/WIF (Keyless), Trivy/Bandit (Supply Chain Security).
- **IaC & Automation:** Terraform (Modular IaC, Remote State), Python 3.10+ (AsyncIO), Bash, GitHub Actions.
- **Observability:** Prometheus, Cloud Monitoring, JSON Structured Logging, SLO/SLA Engineering.

ARCHITECTURAL PROJECTS

Resilience Control Plane (RCP) | *Governance Middleware for Agentic AI*

- Architected a production-grade governance middleware to secure autonomous agentic AI workloads, reducing potential enterprise financial exposure by **\$250,000+ per incident**.
- Engineered an OPA-based policy engine for sub-2ms governance decisions and transitioned to **Workload Identity Federation (WIF)** to eliminate long-lived credential risks.
- Established an adversarial peer-review process, resulting in an audited "Tombstone Protocol" for automated crash forensics and system reconciliation.

Serverless Agentic Governance Controller | *GKE Event-Driven Control Plane*

- Developed a production-ready system to prevent "token runaway" in LLM apps, autonomously terminating expensive pods in <100ms (p99 latency).
- Integrated Kyverno 1.10.0 for pre-execution budget gating and policy-as-code fiscal governance.
- Maintained >80% test coverage using Pytest, Trivy, and Bandit CI/CD integration.

NorthStar Commerce Multi-Cloud DR Platform | *High-Availability Infrastructure*

- Architected active-passive disaster recovery across AWS and GCP, achieving **0s RTO and 1s RPO** via automated Terraform-based infrastructure and DNS failover.
- Implemented OIDC keyless authentication across multi-cloud boundaries, eliminating manual secret management.

PROFESSIONAL EXPERIENCE

Independent Projects (SRE & Cloud Architect) | February 2026 – Present

- Designing and deploying production-ready systems for LLM and cloud-native workloads, focusing on observability, automated cost governance, and zero-downtime operations.
- *Key Achievement:* Architected a five-stage governance model (Detect → Evaluate → Enforce → Remediate → Audit) with ConfigMap persistence, ensuring full audit trails for FinOps compliance.

The Onyx Collection | Quality Assurance Technician | Jan 2020 – February 2026

- Applied rigorous root cause analysis (RCA) and systematic process validation to manufacturing lines, mirroring SRE incident management discipline.

Halliburton / Oil Well Perforators | Wireline Operator / Downhole Technician | Sept 2018 – Jan 2020

- Managed safety-critical, high-pressure equipment under federal regulatory oversight; zero unplanned downtime during extended field deployments.

MST / Atlantic Express | Field Supervisor | July 2007 – August 2014

- Led 125+ formal incident investigations under DOT regulatory frameworks; established a structured postmortem methodology now applied to cloud reliability.

CERTIFICATIONS

- **Google Professional Cloud Architect** (Active)
- **AWS Solutions Architect – Associate** (Active)
- **CompTIA Security+** (In Progress, Target: Aug 2026)
