PROFESSIONAL SUMMARY

Hands-on Senior Site Reliability and Platform Engineer with 17 years of operational experience in high-consequence environments. Specializing in building secure, resilient cloud-native infrastructure and governance middleware for autonomous AI workloads. Proven track record of leveraging Terraform, Kubernetes, and multi-cloud architectures (GCP/AWS) to enforce strict reliability metrics, optimize compute costs, and establish automated, zero-trust deployment pipelines.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** GCP, AWS, Kubernetes (GKE, EKS), Terraform, Infrastructure as Code (IaC), Multi-Cloud Topologies.
- **Site Reliability (SRE):** Disaster Recovery (Active-Passive), RTO/RPO Enforcement, FinOps Automation, High Availability, Incident Management, Observability.
- **Security & Governance:** Agentic SRE, Zero-Trust CI/CD, OIDC Federation, Admission Control, Threat Modeling, IAM / IRSA.
- **Data & Networking:** Change Data Capture (CDC), AWS DMS, Global Traffic Routing, VPC Peering.

ENGINEERING PORTFOLIO

Serverless Agentic Governance Controller (SAGC) | 2026

- Built an admission control middleware system to govern autonomous AI workloads, deploying open-source routing and policy evaluation for production environments.
- Engineered automated circuit breakers and fiscal guardrails to strictly enforce budget caps, proactively preventing token runaway and API billing exhaustion in LLM applications.
- Deployed a highly available Resilience Control Plane (RCP) to decouple AI agent execution from underlying infrastructure failures, ensuring deterministic failovers during external vendor degradation.

Multi-Cloud Disaster Recovery Platform | 2026

- Engineered an Active-Passive disaster recovery platform spanning GCP and AWS, utilizing Terraform to mathematically guarantee a 4-Hour RTO and 15-Minute RPO for stateful workloads.
- Configured a "Pilot Light" infrastructure topology on Amazon EKS, aggressively optimizing idle passive compute costs to less than 5% of the primary environment's run-rate.
- Established a zero-trust CI/CD perimeter by replacing static long-lived credentials with GitHub Actions OpenID Connect (OIDC) federation, cryptographically scoping deployment access.

- Configured asynchronous Change Data Capture (CDC) replication via AWS Database Migration Service (DMS) with strict TLS enforcement, ensuring data integrity without impacting cross-cloud latency.

PROFESSIONAL EXPERIENCE

Cloud Platform Engineering (Independent) | February 2026 – Present

- Building and deploying enterprise-grade resilience blueprints and automated cost-governance perimeters for cloud-native and autonomous LLM workloads.
- Developed the Serverless Agentic Governance Controller (SAGC), implementing automated circuit breakers to enforce strict compute and token burn limits.
- Engineered a multi-cloud DR pipeline utilizing a zero-trust OIDC perimeter, designed for rigorous structural validation and strict data integrity constraints.

The Onyx Collection | Quality Assurance Technician | January 2020 – February 2026

- Applied rigorous Site Reliability Engineering (SRE) principles to physical manufacturing lines.
- Led root cause analysis (RCA) on production incidents, establishing a systematic postmortem methodology directly translatable to cloud operations and distributed systems.

Halliburton | Wireline Operator & Downhole Technician | September 2018 – January 2020

- Managed safety-critical, high-pressure equipment under federal regulatory oversight.
- Achieved zero unplanned downtime during extended field deployments in high-consequence operating environments, reinforcing a "Fail-Closed / Safety First" incident command discipline.

MST / Atlantic Express | Field Supervisor | July 2007 – August 2014

- Directed field operations and incident management under rigorous DOT regulatory frameworks.
- Led 125+ formal incident investigations, establishing structured RCA methodology and documentation standards now applied to cloud reliability.

CERTIFICATIONS

- Google Cloud Certified - Professional Cloud Architect (Active)
- AWS Certified Solutions Architect – Associate (Active)
- HashiCorp Certified: Terraform Associate (Expected June 2026)
- CompTIA Security+ (Target: August 2026)
