

BRIAN LASKY

Cloud Infrastructure Engineer | AWS · GCP · Terraform | Multi-Cloud DR

brian-lasky.com | github.com/brianmlasky | linkedin.com/in/brian-lasky-67464086
brian.lasky@outlook.com | Topeka, KS | Remote — Open to Relocation

PROFESSIONAL SUMMARY

Cloud Infrastructure Engineer with 17 years of production operations experience across federal regulatory, oilfield, and manufacturing environments. Certified in AWS and GCP architecture. Builds production-grade infrastructure on Terraform, ECS Fargate, and serverless event-driven systems. Brings formal incident investigation background — 125+ root cause analyses conducted under DOT regulatory scrutiny as a Field Supervisor — directly applicable to cloud incident response and postmortem culture. Practitioner discipline in reliability, observability, and policy enforcement developed across safety-critical environments with zero margin for unplanned downtime. Pursuing CompTIA Security+ (August 2026).

TECHNICAL SKILLS

Cloud Platforms

AWS: ECS Fargate, EC2, Lambda, S3, RDS, IAM, CloudWatch, Route 53
GCP: GKE Autopilot, Cloud Run, Cloud SQL, Pub/Sub, Secret Manager
Multi-cloud architecture and cross-cloud DR strategies

Infrastructure and Automation

Terraform: modular IaC, remote state, workspace management
Docker, GKE Autopilot, ECS Fargate, KEDA (event-driven autoscaling)
CI/CD pipeline management (GitHub Actions)
Bash, Python: automation, failover scripting, and pipeline orchestration

Security and Compliance

OIDC and Workload Identity Federation (keyless authentication)
IAM policy design and least-privilege enforcement
Secret management, audit logging, compliance validation

Observability and Reliability

CloudWatch, GCP Cloud Monitoring
Incident response workflows, RTO/RPO validation, postmortem documentation
SLO/SLA design, uptime and latency monitoring

AI and Agentic Systems

LiteLLM: multi-model routing and proxy management
Serverless agent orchestration
Event-driven pipeline architecture

CERTIFICATIONS AND LICENSES

Google Professional Cloud Architect | 2026
AWS Solutions Architect – Associate | 2026
CompTIA Security+ | In Progress — Target August 2026
Class A CDL — HazMat Endorsement | TSA Federal Vetting | Active 2018 – 2026

PORTFOLIO PROJECTS

NorthStar Commerce DR Platform | github.com/brianmlasky/multi-cloud-dr-platform

Architected and deployed a production-grade multi-cloud disaster recovery platform achieving RTO of 0s (target <60s) and RPO of 1s (target <300s) across AWS ECS Fargate and GCP Cloud Run. Implemented automated DNS failover via Route 53, cross-cloud PostgreSQL replication from RDS to Cloud SQL with S3/GCS staging, and environment-aware failover scripting validated through end-to-end simulation. Infrastructure fully managed in Terraform with OIDC keyless authentication throughout.

Technologies: Terraform, AWS ECS Fargate, GCP Cloud Run, RDS PostgreSQL, Cloud SQL, Route 53, S3, GCS, Python, Bash, Docker

Serverless Agentic Platform | In Development — Est. Q3 2026

Production-grade event-driven system in active development on GCP Cloud Run and AWS Lambda. Planned features include LiteLLM multi-model routing, KEDA autoscaling, OIDC keyless authentication, and Secret Manager integration. Designed for reliability, observability, and security from initial architecture — not retrofitted.

Technologies: GCP, AWS, Terraform, Docker, LiteLLM, KEDA, OIDC, Python

PROFESSIONAL EXPERIENCE

Cloud Infrastructure Engineer — Independent Projects
Self-Directed | February 2026 – Present

Full-time transition into cloud infrastructure engineering. Completed production-grade multi-cloud DR platform (NorthStar) achieving 0s RTO and 1s RPO across AWS and GCP. Actively developing Serverless Agentic Platform. Pursuing CompTIA Security+ (Target August 2026).

- Architected and deployed NorthStar Commerce DR Platform achieving 0s RTO and 1s RPO across AWS ECS Fargate and GCP Cloud Run
- Implemented automated DNS failover via Route 53, cross-cloud PostgreSQL replication, and OIDC keyless authentication
- Authored Terraform IaC managing full infrastructure lifecycle across both cloud providers

- Developing Serverless Agentic Platform using LiteLLM multi-model routing, KEDA autoscaling, and Secret Manager integration

Quality Assurance Technician

The Onyx Collection | Belvue, KS | January 2020 – February 2026

Manufacturing QA role with direct accountability for product standards enforcement, defect identification, and compliance documentation in an active production environment.

- Identified and documented product defects against engineering specifications, enforcing zero-tolerance quality standards on active production lines
- Applied root cause analysis to recurring defect patterns, driving upstream process corrections and reducing repeat defect occurrence
- Developed systematic inspection protocols that increased defect detection rates at source
- Maintained audit-ready documentation supporting regulatory and customer quality requirements

Wireline Operator / Downhole Motor Technician

Oil Well Perforators / Halliburton Sperry Drilling | September 2018 – January 2020

Operated wireline and downhole motor systems in high-pressure oilfield environments under federal regulatory oversight. Accountable for equipment reliability, crew safety, and operational execution in remote deployments with no margin for unplanned downtime.

- Operated and maintained safety-critical downhole wireline and motor systems across extended field deployments
- Supported equipment failure investigations and contributed field-level observations to formal RCA processes
- Coordinated multi-crew operations under time-critical well completion schedules
- Enforced HazMat handling and transport protocols under federal CDL and TSA requirements

Equipment Operator — Wireline / Cementing / Frac

Patriot Well Solutions | Casper, WY | October 2014 – September 2017

Operated high-pressure well service equipment across wireline, cementing, and hydraulic fracturing operations. Responsible for equipment integrity, job execution, and field-level safety compliance in active oilfield environments.

- Executed well completion operations under strict safety and regulatory protocols
- Maintained and inspected high-pressure equipment to manufacturer

- and regulatory standards
- Supported incident investigations and contributed field-level observations to formal RCA processes
- Operated under HazMat and DOT compliance requirements throughout all transport and field operations

Field Supervisor

MST / Atlantic Express | Los Angeles, CA | July 2007 – August 2014

Supervised field operations and personnel in a regulated federal transportation environment. Responsible for compliance, scheduling, and operational performance across assigned routes and crews.

- Investigated and documented 125+ accidents and incidents under federal DOT regulatory frameworks, producing formal written reports with findings, contributing factors, and corrective actions
- Built structured incident investigation methodology directly applicable to cloud incident response and postmortem culture
- Supervised daily field operations and ensured regulatory compliance across assigned personnel
- Managed scheduling, route coordination, and real-time operational adjustments
- Maintained CDL and transportation compliance records for supervised fleet operations

EDUCATION

Butler Community College | El Dorado, KS | Attended 2003 – 2005

Franciscan University of Steubenville | Steubenville, OH | Attended 2001 – 2003
