PROFESSIONAL SUMMARY

Senior Site Reliability Engineer and dually certified Cloud Architect with 17 years of experience in production operations. Specializing in Fiscal SecOps and Agentic SRE, I act as the translation layer between CTO resilience mandates and CFO budget constraints. I design multi-cloud disaster recovery topologies and build autonomous infrastructure governance to secure and scale emerging AI workloads.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** Multi-Cloud Architecture, GCP, AWS, Kubernetes (GKE, EKS), Terraform, Infrastructure as Code (IaC).
- **Site Reliability (SRE):** Disaster Recovery (Active-Passive), RTO/RPO Definition, FinOps / Cloud Cost Optimization, High Availability, Incident Management, Chaos Engineering (DiRT).
- **Security & Governance:** Fiscal SecOps, Agentic SRE, Zero-Trust Architecture, OIDC Federation, Threat Modeling (STRIDE), IAM / IRSA.
- **Data & Networking:** VPC Topology, Change Data Capture (CDC), AWS DMS, Global Traffic Management (Route 53).

ARCHITECTURAL PROJECTS

Serverless Agentic Governance Controller (SAGC) | *Independent Architecture Portfolio* | 2026

- **Developed an admission control middleware system** to govern autonomous AI workloads, pioneering Agentic SRE practices for production environments.
- **Implemented automated circuit breakers and Fiscal SecOps guardrails** to strictly enforce budget caps, proactively preventing token runaway and API billing exhaustion in LLM-driven applications.
- **Designed a highly available Resilience Control Plane (RCP)** to decouple AI agent execution from underlying infrastructure failures, ensuring deterministic failovers during external vendor degradation.

Multi-Cloud Disaster Recovery Platform | *Independent Architecture Portfolio* | 2026

- **Architected an Active-Passive disaster recovery platform** spanning Google Cloud Platform (GCP) and AWS, mathematically guaranteeing a 4-Hour RTO and 15-Minute RPO for Tier 2 business-critical workloads.
- **Engineered a "Pilot Light" infrastructure topology** utilizing Terraform and Amazon EKS, aggressively optimizing FinOps to restrict idle passive compute costs to less than 5% of the primary environment's run-rate.

- **Established a zero-trust CI/CD perimeter** by replacing static long-lived credentials with GitHub Actions OpenID Connect (OIDC) federation, cryptographically scoping deployment access to specific repositories and branches.
- **Designed asynchronous Change Data Capture (CDC) replication** via AWS Database Migration Service (DMS) with strict TLS enforcement, ensuring data integrity while eliminating cross-cloud latency impacts on the primary database.
- **Authored regulatory-grade architecture documentation**, including Security Architecture Specifications (STRIDE analysis) and SEV-1 incident runbooks that balance automated scale-up with human-in-the-loop split-brain prevention.

PROFESSIONAL EXPERIENCE

Cloud Architecture Practice (Independent Consulting) | February 2026 – Present *Architecting enterprise-grade resilience blueprints and automated cost-governance perimeters for cloud-native and autonomous LLM workloads. Specializing in Fiscal SecOps and Agentic SRE.*

- **Key Achievement:** Engineered the Serverless Agentic Governance Controller (SAGC), implementing a strict five-stage FinOps lifecycle (Detect → Evaluate → Enforce → Remediate → Audit) with automated circuit breakers to prevent token runaway.
- **Key Achievement:** Architected a Multi-Cloud Disaster Recovery (DR) platform utilizing a zero-trust OIDC perimeter and an Active-Passive "Pilot Light" topology, mathematically guaranteeing a 4-Hour RTO while restricting idle compute costs to < 5%.

The Onyx Collection | Quality Assurance Technician | January 2020 – February 2026 *Applied rigorous Site Reliability Engineering (SRE) principles to physical manufacturing lines.*

- Led root cause analysis (RCA) on production incidents, establishing a systematic postmortem methodology directly translatable to cloud operations and distributed systems.

Halliburton / Oil Well Perforators | Wireline Operator & Downhole Technician | September 2018 – January 2020 *Managed safety-critical, high-pressure equipment under federal regulatory oversight.*

- Achieved zero unplanned downtime during extended field deployments in high-consequence operating environments, reinforcing a "Safety > Uptime" incident command discipline.

MST / Atlantic Express | Field Supervisor | July 2007 – August 2014 *Directed field operations and incident management under rigorous DOT regulatory frameworks.*

- Led 125+ formal incident investigations, establishing structured root cause analysis (RCA) methodology and documentation standards now applied to cloud reliability.
- Maintained 100% safety compliance record across extended field deployments.

CERTIFICATIONS

- Google Cloud Certified - Professional Cloud Architect (Active)
- AWS Certified Solutions Architect – Associate (Active)
- HashiCorp Certified: Terraform Associate (Expected June 2026)
- CompTIA Security+ (Target: August 2026)
