

BRIAN LASKY

Principal AI Infrastructure Architect | Agentic SRE

Topeka, KS | Remote | brian-lasky.com | github.com/brianmlasky | linkedin.com/in/brian-lasky-sre | brian.lasky@outlook.com

PROFESSIONAL SUMMARY

Principal AI Infrastructure Architect & Agentic SRE specializing in Fiscal SecOps and autonomous workload governance. 17 years of experience in high-consequence production operations (regulated industrial/DOT). Expert at architecting 'fail-closed' control planes that mitigate financial exposure and operational instability for enterprises deploying Agentic AI.

TECHNICAL SKILLS

- **AI Infrastructure:** Agentic Governance, Fiscal SecOps, LLM Routing/Gateways, Admission Control, Policy-as-Code.
- **Cloud & Platform:** GCP, AWS, Kubernetes (GKE, EKS), Terraform, Multi-Cloud Topologies, Zero-Trust Architecture.
- **Site Reliability (SRE):** Disaster Recovery (Active-Passive), RTO/RPO Enforcement, FinOps, Incident Command, Observability.
- **Security & Governance:** Workload Identity Federation (WIF), OIDC, OPA/Rego, Threat Modeling, Regulatory Compliance.

ENGINEERING PORTFOLIO

- **Serverless Agentic Governance Controller (SAGC):** Architected middleware to govern autonomous AI. Engineered real-time circuit breakers to enforce fiscal budget caps at the Kubernetes control plane, preventing "Denial of Wallet" risks and LLM token runaway.
- **Multi-Cloud Disaster Recovery Platform:** Architected an active-passive DR platform spanning GCP and AWS, utilizing Terraform to mathematically guarantee a 4-Hour RTO and 15-Minute RPO. Implemented OIDC-federated CI/CD to eliminate static secrets.

PROFESSIONAL EXPERIENCE

Independent Cloud Architect & Platform Engineer | February 2026 – Present

- **AI Governance:** Architected the Serverless Agentic Governance Controller, a policy-driven engine bridging LLM API execution with real-time fiscal enforcement.
- **Fiscal SecOps:** Implemented egress-gate logic in policy-as-code to physically enforce budget caps, reducing uncontrolled LLM compute spend by 60–70%.
- **Resilience Engineering:** Designed an active-passive DR pipeline across GCP/AWS, utilizing asynchronous CDC and keyless authentication to guarantee 99.95% availability for mission-critical workloads.

The Onyx Collection | Quality Assurance Technician | 2020 – 2026

- Transitioned manufacturing QA into systematic incident command, applying root-cause analysis (RCA) to reduce production variability—methodologies now applied to distributed systems reliability and incident postmortems.

Halliburton | Wireline Operator & Downhole Technician | 2018 – 2020

- Maintained zero unplanned downtime in safety-critical, high-pressure environments under federal regulatory oversight, establishing the "Fail-Closed" architectural mindset now applied to autonomous cloud infra.

MST / Atlantic Express | Field Supervisor | 2007 – 2014

- Led 125+ regulatory incident investigations under DOT frameworks, creating a foundation for forensic audits and reliability telemetry in distributed cloud environments.

CERTIFICATIONS

- Google Cloud Certified - Professional Cloud Architect (Active)
- AWS Certified Solutions Architect – Associate (Active)
- HashiCorp Certified: Terraform Associate (Expected June 2026)
- CompTIA Security+ (Target: August 2026)
